UNDERHOOD PARTS

OE QUICK CLAMP®

THE EASIEST, ORIGINAL EQUIPMENT CLAMP TO INSTALL.
UNIFORM, CONSTANT TENSION FOR A MORE SECURE,
LONGER LASTING HOSE.

No over or under tightening worries.
No cold weather leaks and no special tools required.
Pre-opened in the package. Place it on the hose and pull the tab. The clamp tightens automatically.
It's that easy!
For the Do-It-Yourselfer, find the right size clamp the first time with the Size Guide on every package.

Automobile manufacturers use a standard numbering system. Those numbers appear on the tabs of the original clamp. Our sizes match the manufacturer's numbers and can be found on the tabs of our clamps as well. The Needa OE Clamp is a one piece clamp of modified CK75, manufactured in 12mm band widths. Even at low temperatures, sufficient radial clamping force is generated, which guarantees high sealing reliability. Made for use in cooling and heating systems, fuel vent lines and air duct systems in today's vehicles.

Available in carded two packs or boxes of 10.

Inner springs keep tension on your hoses during cold start up conditions. When the hose heats up, the self-adjusting Smart Clamp's springs flatten out to keep the correct tension, promoting longer hose life. Smart Clamp is available in either a handy, carded two pack for the Do-It-Yourselfer, or boxes of 10 for the professional installer.

COIL ON PLUG REPAIR KITS

Newer vehicles are using individual coil on plug ignitions instead of traditional coil and wire systems. The spark plug connector springs and boots are beginning to fail for a number of reasons:

THE PROBLEM:

1. Boots are developing cracks due to high the heat environment and this is allowing spark leak and arcing.
2. Contact springs are rusting out due to moisture in the spark plug well.
3. When boots are pulled off the plug, additional cracking or spring extension takes place. Until now the solution was to replace each coil.

THE SOLUTION:

Coil On Plug Tune Up Kits! The majority of coils that are being replaced today do not need replacing! With every tune up done on today's newer engines, simply replace the boot and contact spring. Coils go for anywhere from \$50.00 to \$80.00 Each. With the Needa Coil On Plug Tune Up kit, replace four boots and springs for under \$20.00. Huge savings for the installer or the Do-It-Yourself customer.

The Needa Coil On Plug Tune Up Kits are made in the USA and are original equipment replacements. They are made entirely of 450° silicone. Competitor's boots are made of rubber which retain carbon black. Carbon black acts as a conductor and will divert power from the spark plug to the engine. This can conflict with sensitive electronic equipment, including the cars' ECU. Applications for all late model vehicles are available now.
